- Pump control

The MIS-3500 is a intelligent pressure sensor which consist of a MEMS piezoresistive pressure sensor and a CMOS sensor interface IC. The interface IC enables easy and precise calibration of resistive bridge sensors via EEPROM. It correct digitally offset 、 gain and both temperature coefficients. All devices were factory calibrated and temperature compensated. Using MIS-3500 series is easy to get rid of bothersome calibrations and temperature compensations. The MIS-3500 can provide 3V or 5V rail-to-rail ratiometric analog output.
